

The Language of Hierarchical Systems

Space. Rules. Dynamics. Diagnostics.

Model Quick Reference

Four Axes

Axis	Name	Dimensions
Z	Identity	Z ₁ Language · Z ₂ Agency · Z ₃ Vision
Y	Quality	Y ₁ Embeddedness · Y ₂ Adaptation · Y ₃ Innovation
X	Connections	X ₁ Breadth · X ₂ Depth · X ₃ Density
W	Resources	W ₁ Share · W ₂ Resilience · W ₃ Duration

Three Aspects

Aspect	Question	Position in axis
Topology	How is it structured?	First dimension (1)
State	What quality does it possess?	Second dimension (2)
Dynamics	How does it move?	Third dimension (3)

Five Levels

Level	Phase	Criterion
0	Absence	Event not recorded
1	Formal structure	Form exists, no movement
2	Development	Form adapts, exchange is substantive
3	Stable state	Self-reproduction without external impulse
4	Self-reproduction	System generates quality independently

Three Core Rules

Transition pattern: $Z \rightarrow Y/X \rightarrow W$. Identity first. Resources last.

Weak link rule: The minimum determines reality. Axis with values 3, 1, 3 operates at level 1.

Field separation: Z, Y, X — action field. W — result field. Do not manage W directly.
